

# PCI and Low Profile PCI Board Reference Guide

Interface Corporation provides approximately 300 PCI boards and 60 Low Profile PCI boards of various categories so that you can find suitable boards for your system.

This Reference Guide includes descriptions and product lists of Interface PCI and Low Profile PCI boards.

#### **About PCI Board**

The PCI (Peripheral Component Interconnect) is one of local computer bus architectures to connect processor to a computer and peripheral devices designed by Intel Corporation. The PCI bus is widely adopted as an industry-standard bus to extend functions of computers, workstation, and server. It features low dependency on CPU and achieves high-speed data transfer (theoretical value: 133 MB per second (max.)). Interface Corporation provides a wide variety of PCI boards; more than 300 different types.

The bus requirement is PCI local bus (Rev 2.1 or later), 32-bit bus width, 33MHz clock, and 5 V and/or 3.3 V signaling environment.

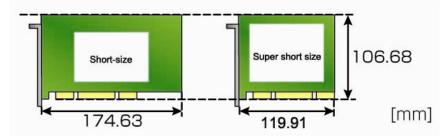

They support Windows 7, Embedded Standard 7, Embedded Standard 2009, Server 2008, Vista, Server 2003, XP, Linux, and DOS.

Interface Corporation also provides Low Profile PCI boards for smaller system designs. The electrical definitions are the same between PCI and Low Profile PCI boards. The board size is different.

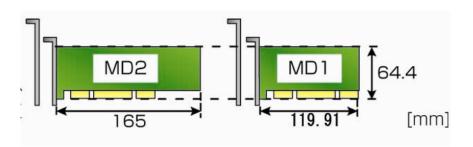

A bracket for PCI slot is attached to each Interface LPC (Low Profile PCI) boards so that you can use LPC board in standard PCI slots.

### **About Low Profile PCI Board**

The Low Profile PCI boards offer a new mechanical standard based on the PCI local Bus Specification. Low Profile PCI Boards have the same signal protocol, electrical definitions, and configuration definitions as standard PCI boards. As the size is smaller than PCI boards, Low Profile boards are intended for use in small footprint computers. There are two defined board length for Low Profile PCI, MD1 and MD2. The length of MD1 is 119.91 mm and MD2 is 165.00 mm.

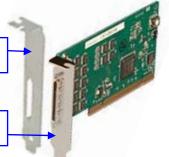

Due to the height difference of the bracket, Low Profile boards do not insert into standard PCI slots. Interface Corporation provides a bracket adapter for standard PCI slots.

Interface Corporation provides rich lineup of the Low Profile PCI boards as LPC series.

The LPC series is RoHS compliant and supports Windows 7, Embedded Standard 7, Embedded Standard 2009, Server 2008, Vista, Server 2003, XP, Linux, and DOS.
